Researchers from GCU's Safeguarding Health through Infection Prevention Team (SHIP) were out at Cadder Primary during Antimicrobial Awareness Week in November 2018. Pupils identified how far germs travel in sneezes with 'Professor Snot', designed a germ fighting superhero, inspected how clean their hands were and saw how germs move with magic dust.

Eight members of the SHIP team worked with approximately 75 pupils across P3, P4 and P5. The pupils learned about microbes and how they can be spread, and how infections can be prevented through good hand washing. The pupils then shared their learning with the wider school community. The Evening Times and GCU news covered the story which took the message to a large audience on social media and print press.
